

**uPVC WINDOWS ARE EXTREMELY EASY TO CARE FOR AND REQUIRE MINIMAL MAINTENANCE. BUT YOU SHOULD STILL CLEAN AND CARE FOR uPVC WINDOWS REGULARLY – ESPECIALLY THE GLAZING. CORRECT HANDLING WILL ENSURE YOU LONG AND LASTING ENJOYMENT.**

**■ VENTA WINDOWS RECOMMENDS THE FOLLOWING REGULAR CLEANING PROCEDURE, AS REQUIRED:**

- Avoid lime and mortar splashes on the profile, glazing and fittings. Both the profile and the glazing could be damaged and fittings jammed as a result of solidified mortar residue.

- The fittings should be oiled at least once a year to guarantee a constant and easy movement. Moving and rubbing metal elements need only occasionally a little oil or grease to operate with ease.

- For normal cleaning of the frame surface use a solution of mild dishwashing liquid. Do not use scouring agent or paint thinner. For stubborn dirt always use special cleaning agents that can be obtained from the window supplier or from a window specialist. Agents like diluted nitro, benzine or similar are to be avoided.

- From time to time a control of the drainage holes in the frame is necessary. A perfect drainage is only provided if the openings are kept clean.

- Rub the seals in the frame twice a year with sealing agent e.g. talcum or silicon oil (from specialists), to keep them soft and in good working order. Damaged seals have to be replaced.
